Summary

SRE with 2+ years in DevOps and SRE. I keep production sites for 40+ enterprise brands fast, secure and online, and I own projects from hosting design through go-live to day-2 operations.

Technical Skills

Cloud: AWS (EC2, ECS, ALB, CloudFront, S3, RDS, IAM, SSM, SES), Azure, GCP, Cloudflare, DigitalOcean
Containers & IaC: Docker, Kubernetes, Terraform, Ansible
CI/CD: GitHub Actions, Jenkins, blue-green deploys, automated rollback
Observability: Prometheus, Grafana, ELK, uptime monitoring, incident response
Security: VAPT remediation, WAF, TLS, least-privilege IAM, PAM
Web stack: Linux, nginx, Apache, Node.js, Next.js, Strapi, WordPress, MySQL, PostgreSQL
Languages: Bash, Python, Go

Experience

Site Reliability Engineer Mar. 2026 – Present
Schbang *Mumbai, India*

- Run production for **40+ enterprise brands** across **30+ cloud environments** on AWS, Azure, Cloudflare, DigitalOcean and E2E, in both our accounts and clients'
- Closed **100%** of infrastructure findings from a third-party VAPT audit (TLS, security headers, rate limiting, admin and network lockdown)
- Patched **dozens of live servers** for critical PHP and Node.js CVEs with **zero lasting downtime**, using backups, dry runs and automatic rollback
- Take new builds from costed hosting design to staging to production go-live, choosing WAF, load balancing and auto-scaling only where needed
- Built deploy pipelines that health-check every release and roll back on failure for Next.js, Strapi, Node.js and WordPress apps
- Removed myself as a bottleneck with a self-serve portal for AWS bills, instances and IAM users across accounts, behind an SSO gateway I built
- Built an uptime monitor that alerts the team before clients notice, and an in-house VAPT scanner on open-source tools

DevOps Engineer Jul. 2024 – Mar. 2026
BeHooked *Mumbai, India*

- Cut monthly AWS spend by **90%** through right-sizing and automation
- Cut latency by **35%** by migrating a monolith to microservices on Kubernetes and EC2
- Cut deploy time by **30%** across 20+ repos with GitHub Actions and Docker Hub
- Improved uptime by **25%** by automating incident response; built a Discord bot for real-time cost alerts

SRE Intern May 2023 – Jul. 2023
Dukaan *Bengaluru, India*

- Cut latency by **20%** as part of a cloud-to-bare-metal migration
- Raised ops efficiency by **40%** by automating routine tasks in Bash and Python; added Grafana on ELK for log monitoring

Projects

DevOps Project Portfolio | *AWS, Docker, Ansible, nginx, GitHub Actions* github.com/kaalpanikh

- Built 20+ infrastructure projects, including blue-green deployment, a bastion host, automated backups and a monitoring stack, each documented in a write-up on nikhilmishra.xyz

Education

Theem College of Engineering, University of Mumbai Boisar, Maharashtra
Bachelor of Engineering in Computer Engineering *Aug. 2021 – May 2025*
